OIP v0.2.0 Baseline Verification Report

Status: RESEARCH-STAGE ONLY
Scientific/production approval: NOT GRANTED
Report generated (UTC): 2026-10-25T06:44:35.804884+00:00

1. Executive Summary

This report documents the supplied notebook outputs for a synthetic baseline verification of the OIP v0.2.0 decision engine. The export contains 114 planned unique test records and 14 supplemental core-reason verification records, for 128 exported rows. The reported checks passed. This result is limited to the tested inputs and recorded checks.

2. Test Results

Section	Records	Reported status
Core	14	PASS: 14
Edge	8	PASS: 8
Validation	5	PASS: 5
Output_Contract	5	PASS: 5
Immutability	3	PASS: 3
Configuration	4	PASS: 4
Precedence	3	PASS: 3
Exhaustive_Matrix	72	PASS: 72
Core_Reason	14	PASS: 14

3. Claim Boundaries and Limitations

The recorded PASS results support only the specified software checks on the tested inputs. They do not establish scientific validity, causal validity, real-world safety, security certification, production readiness, or compliance with any later OIP version. The reference expectations for the exhaustive matrix were separately coded from the stated rules, but were not independently validated by an external auditor.

4. Export Integrity

The notebook output reported successful JSON/CSV read-back and row-count checks. SHA-256 hashes below identify the exact exported files used to generate this report. A hash can detect byte-level changes when compared against a trusted recorded value; it does not by itself prove the content is correct or prevent tampering.

JSON SHA-256

a1f387bcf9a855ea9a9cc233f9697661274d871d45ce85d0347e7f564c6b17bd

CSV SHA-256

5. Release Decision

Decision: RESEARCH-STAGE ONLY. The recorded baseline tests and corrected export checks are reported as passing. Independent scientific validation and production approval have not been granted. The notebook, source identity evidence, and limitations should accompany these artifacts when shared.
